

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1- 24. (canceled).

25. (currently amended): A laminateAn optical information recording substrate comprising a cured film of a photo-curable transfer sheet and having an uneven surface of recorded pits and/or grooves on one side of the cured filmdisposed on a reflective layer, said photo-curable transfer sheet comprising a photo-curable composition which comprises a homopolymer or copolymer derived from alkyl acrylates and /or alkyl methacrylates and having a photopolymerizable functional group and weight-average molecular weight of not less than 5,000 and a monomer or oligomer having a photopolymerizable functional group, a ratio by weight of the homopolymer or copolymer : the monomer or oligomer having a photopolymerizable functional group being 50-80 : 20-50, and which is capable of deforming by application of pressure, at least one side of the photo-curable transfer sheet having a surface roughness (Ra) of not more than 30nm.

26. (previously presented): The laminate as defined in claim 25, wherein the homopolymer or copolymer has a glass transition temperature of not more than 20°C.

27. (previously presented): The laminate as defined in claim 25 or 26, wherein the at least one side of the photo-curable transfer sheet has a surface roughness (Ra) of not more than 10nm.

28. (previously presented): The laminate as defined in claim 25, wherein the photo-curable transfer sheet has a light transmittance of not less than 70% in a wavelength range of 380 to 420 nm.

29. (previously presented): The laminate as defined in claim 25, wherein the photo-curable transfer sheet has a thickness of 5 to 300 $\mu$ m.

30 - 31. (canceled).

32. (previously presented): The laminate as defined in claim 26, wherein the homopolymer or copolymer has a glass transition temperature of from 0°C to 20°C.

33. (new): The optical information recording substrate as defined in claim 25, wherein a reflective layer is formed on the uneven surface of the cured film.

34. (new): The optical information recording substrate as defined in claim 26, wherein a reflective layer is formed on the uneven surface of the cured film.

35. (new): The optical information recording substrate as defined in claim 27, wherein a reflective layer is formed on the uneven surface of the cured film.

36. (new): The optical information recording substrate as defined in claim 28, wherein a reflective layer is formed on the uneven surface of the cured film.

37. (new): The optical information recording substrate as defined in claim 29, wherein a reflective layer is formed on the uneven surface of the cured film.

38. (new): The optical information recording substrate as defined in claim 32, wherein a reflective layer is formed on the uneven surface of the cured film.
